

RIDFINDER

Independent, buyer-side advisory for Remote ID and RF-spectrum detection equipment.

What we do

We help professional buyers - integrators, security teams, site operators - choose drone-detection equipment with evidence instead of marketing claims. We do not manufacture hardware and we hold no inventory, so a recommendation cannot quietly favour a house brand.

Services

1. Free requirements screening - one business day turnaround
2. \$199 selection report - 2-3 candidates, per-parameter comparison with sources and dates, decode samples, unverified-items list, 30-minute walkthrough call
3. Vendor introductions - referral relationships disclosed in writing

Evidence discipline

Every claim carries an evidence label: measured (our own tests, conditions stated), vendor-reported (with date checked), or community (credible operator reports, not replicated). We do not evaluate jammers or counter-UAS equipment.

Coverage

Site content in six languages: English, Spanish, German, Portuguese, French and Russian. Engagements in English or German.
